Title

This is a title

And a sub title

Title - setup

Titles are headers for sections inside a web page, titles can consist of both main and sub title, and they can be aligned left, center or right.

Setup

Title - Main title, which is also the first line

Sub title - Second line in title

Section - Bookmark position on web page

Separator line - Decorative line below a title

Text alignment - Horizontal alignment for the title

Title color - Color for the first line

Sub title color - Color for the second line

Background theme - Should background of the block be dark or light

Show block - When to show the title (see more info here)

## Text

This is a text block with several columns. You can write normal text, but you can also use standard HTML formats like headers, bullet points etc.

### Here is a header

You will be able to make

1. Links
2. Upload images
3. Upload documents

And make different header sizes

---

Maybe we needed a line separator just there or make text **bold** or *italic* or even ***both***

Text - setup

Text that can separated in either on column or several columns. The text can be formatted with standard formatting like headers, bold or italic text, image, hyperlinks and other content.

Setup

Text - HTML formatted text

Text alignment - How to horizontally align the text (left, center or right)

Small vertical margin - Minimize top and bottom margins and use less space on the page

Text columns - You can render the text in several columns - like a newspaper article

Large first letter - Create a large first letter, an effect used in many old books

First letter color - If large letter effect is used, what color should the first letter have

Text color - General color for the whole text

Background theme - Should background of the block be dark or light

Show block - When to show the title (see more info [here](#))
